

## Build America, Buy America Act (BABAA) Compliant

MADE IN AMERICA

### Built in Detroit

---

At Kirlin, we believe in the value of American-made products and the benefits they bring to our workers, communities, and environment. Our commitment to manufacturing quality lighting fixtures at our Detroit, MI headquarters reflects this belief, aligning us with programs like the Build America, Buy America Act. By choosing Kirlin, you're not only investing in superior lighting but also supporting American workers and limiting environmental impact.

# A Commitment to American Manufacturing

## Proudly Supporting Build America, Buy America

Our products not only meet the highest industry standards but also align with critical government statutes like the Build America, Buy America Act, ensuring compliance for federal projects.

The Build America, Buy America Act (BABAA) was enacted in 2022 under Sections 70901-70952 of the Bipartisan Infrastructure Act and ensures that manufactured products for federally funded projects are made predominantly in the U.S. It requires that at least 55% of the components of a product must be mined, produced, or manufactured domestically.

All Kirlin products bearing the "Made in the USA" mark meet these criteria, making them eligible for federal project use. You can also use the [product filter](#) on our website to find fixtures that comply with BABAA. You can find a general letter showing our compliant product families [here](#). Our team is happy to furnish project- or product-specific compliance letters on request.

In addition to qualifying for BABAA, Kirlin is also the only lighting manufacturer that is certified with both a HUBZone (Historically Underutilized Business Zone) and WOSB (Women-Owned Small Business) compliance. Each of these certifications can be the difference-maker on a federally funded project.

## WHY MADE IN AMERICA?

- **Support American Jobs:** By manufacturing our products locally, we contribute to the growth and sustainability of American jobs.
- **Boost Local Economies:** Our commitment to U.S.-based production strengthens local economies by keeping investments within the country.
- **Minimize Environmental Impact:** Domestic production reduces transportation needs, leading to lower carbon emissions.
